Sprint 2 Requirements

StyleView Mobile Web App

Team Number	13
Team Members	Ben Haney Bradley Brown Caleb Hite Charlie Doherty Kai Barnhart Will Calhoun
Project Name	StyleView (work in progress)
Project Synopsis	A mobile web app that uses the phone's front camera to overlay shirts and hairstyles on the user in real time

Proposed Sprint 2 (Committed points)

Req	**Description**	**Pts**	**Why in Sprint 2?**
8	Detect the user's upper body in the camera.	8	Run MediaPipe Pose Landmarker on live frames in the browser. Load model files from the app and keep frames on the phone.
9	Show a sample shirt on the user.	8	Draw a bundled sample shirt on the live preview using the detected shoulder and hip points.
10	Keep the shirt lined up as the user moves while facing the camera.	13	Update the shirt's position, size, and angle as the user moves while facing the camera.

11	Hide the shirt when body tracking is lost and bring it back when tracking returns.	5	Hide the shirt when the model loses the upper body. Show it again once tracking returns.
	Committed total	**34**	

Proposed Sprint 2 (Stretch points)

Req	**Description**	**Pts**	**Why in Sprint 2?**
31	Show when the tracking tools are loading and let users retry if loading fails.	3	Show when the pose model is loading and let the user retry if it fails.
32	Keep shirts and hairstyles lined up in the mirrored camera view.	3	Check shirt alignment in the mirrored preview when the user moves left or right.
20	Let users adjust the shirt’s size and position or reset it.	3	Let the user fine-tune the sample shirt once automatic placement works.
	Stretch Total	**9**
